Flexible and extendable infrastructure for your parking. The Woertz flat cable system allows you to install the infrastructure first and add chargers as your needs in charging stations evolves.*

No cable interruption, no stripping, no special tools and no phase crossing mistake!
Add a branching box anywhere along the flat cable at anytime, to add a charger to your installation as people buy an electrical vehicle.

woertz 

1 Install infrastructure

The Woertz flat-cable system allows investment in shared infrastructure to make EV charging available to all residents.

Having the infrastructure set up makes your housing cooperative more attractive.

2 Charging stations

Install any charging station, * connect it to the flat-cable easily and without stripping nor interrupting the cable with a Woertz insulating piercing, IP 65, branching box.

The feeding box can be installed anywhere along the flat cable, also without stripping nor interrupting the flat cable.

3 Expand installation

Scaling an existing installation requires no extra work or infrastructure investment, all along the installed length of the flat cable.

The electrician simply connects the new charging stations to the existing infrastructure.

Woertz 5G16 mm²

Efficient cabling for both power supply and distribution.

Produkt	5G16 mm ²	Artikel No.
Flat cable		49606
Junction box		49615
Branching box		49616
